A Coruña, Spain · Remote or hybrid · English B2

PROFILE

Product Designer who designs and builds: from research and information architecture to prototypes, UI and low-code implementation, with no development team. I specialise in **B2B SaaS with multiple roles and permissions** and in **products with AI in the interaction**: a platform I designed has more than 1,000 active users, and I co-founded an AI travel app in public beta. I come from Human Resources, so I understand the process and the data before I draw the first screen.

EXPERIENCE

Co-founder · Product Designer (UX/UI)

MAITEEGO AI · Remote · Since October 2024

AI travel app (travel companion), B2C and mobile-first. In public beta for 18 months on iOS, Android and web; around 300 registered users. Sole designer; I work in a duo with the CTO and co-founder.

- I design the product end to end: **competitive analysis** (4 competitors, 7 criteria), **information architecture** and flows in Miro, wireframes, prototypes and a **design system in Figma** (typography, colour, spacing and reusable components).
- I designed the AI interaction so every answer is actionable: each place mentioned in the chat is a **verified card** that is added to the itinerary in one tap, with no copying or searching in another app.
- I iterated the core create-itinerary flow **from 4 screens to 2** based on usage feedback, without losing any personalisation data.
- I evolved the product in beta with real users: a redesigned home (asking the AI as the main action), destination guides structured around the traveller's questions, a map with real-time information and an itinerary with weather, route and travel times between stops.
- I handle the **handoff** and support implementation with the CTO; I prototype with Cursor and v0 when I need to validate a screen before it is built.

Product Designer & Low-code Builder · Internal tools and B2B SaaS

HACK A BOSS · A Coruña (remote) · Since June 2022 · In product design since 2023

Tech training and IT recruitment company. I joined as an IT recruiter and six months later moved to designing and building the company's internal products, end to end, for several teams and for client companies. I work in Scrum and Kanban with the product and development teams.

- **Job search platform (B2B SaaS, since 2024)**: 1,057 active users out of 1,400 invited, 7 access profiles, a team of 12 and 30 partner companies. I designed a phased, locked «My search» path for candidates, **work queues by status** for the team and a permission model by role, page, block and field defined in the data, not on each screen.
- **Multi-department recruitment platform (2023)**: 8 departments managing their openings and candidates without seeing each other, with a global view for HR; ~2,000 candidates and 20 daily users. Isolation through pages and permissions, a pool of recoverable applications and a library of reusable job descriptions.
- **Platform for a 110-person hackathon (2025 to 2026)**: 110 guests, 10 teams and 7 judges. **App-free QR check-in** (unique URL + webhook) and jury voting with 5 fixed criteria, judges kept apart and a full real-time grid for the organisers.
- **Feedback-driven iteration**: I redesigned the team's candidate view from a 20+ column table to cards with a fixed hierarchy, after finding that the data checked every day was off-screen; after the change, the team opens 23% fewer profiles per lookup.

- **AI-powered flows:** an integration that reads the candidate's CV and fills in their record automatically; the team went on to process **three times as many applications per day**. More than 60 automations in production across statuses, notifications and syncs.
- Requirements gathering and validation with user teams (recruitment, employability, operations) and client companies; design of internal measurement tools (NPS surveys and 360° reviews) and metrics dashboards for management.

Earlier experience in Human Resources

Recruitment Specialist · Nexian, Vigo · 2022 · HR Assistant · Gallega de Gestión, Moaña · 2017

SKILLS

Product design: Information architecture · User flows · Interactive wireframes and prototypes (low and high fidelity) · Interaction and UI design · Mobile-first and responsive · Designing for roles, permissions, dashboards and back-office · AI interaction design · Developer handoff

User research and validation: User observation and interviews · Requirements gathering · Competitive benchmarking · NPS and 360° surveys · Usage data analysis (SQL, Airtable) · Presenting and defending decisions to the business

Design systems: Design tokens · Components and variants in Figma (Auto Layout) · Accessibility (WCAG AA contrast, keyboard navigation)

Tools: Figma · Penpot · Miro · Notion · Cursor · v0 · Claude and Figma AI in the design workflow

Building (low-code and code): Airtable, Softr and Make (advanced) · REST APIs and webhooks · HTML/CSS and SQL (intermediate) · JavaScript (basic) · GitHub

Ways of working: Scrum and Kanban · Collaboration with product, development and non-technical stakeholders · GDPR

EDUCATION AND CERTIFICATIONS

BA in Labour Relations and Human Resources · University of Vigo · 2019 to 2023

UX/UI design: Foundations of User Experience (UX) Design · Google, 2024 · Fundamentals of UX/UI Design · Microsoft, 2025 · Work with Components on Figma · Coursera, 2024 · Designing User Interfaces and Experiences (UI/UX) · IBM, 2024

Automation, AI and data: Make Advanced · Make Intermediate · Automation to AI Agents: Advanced (Make Academy) · Python, SQL and data visualisation tracks (DataCamp)

LANGUAGES

Spanish: native · Galician: native · English: B2
